

## Structured Decision Making Shiny Storyboard

### Problem

- What is the problem?
- Who defined the problem?
- What is the spatial and temporal scope of the problem?
- What groups of people does it affect?
- What does each group value?

### Sketch/write how you will convey the problem in your app

## Structured Decision Making Shiny Storyboard

### Objectives

- What are the objectives?
- Are they quantifiable and informed by science, policy, and law?
- Who defined the objectives?  
How do you make sure the right people have been consulted?

**Sketch/write how you will convey the objectives in your app**

## Structured Decision Making Shiny Storyboard

## Alternatives

- What are the possible management actions we could take?
- Are they continuous or discrete?

### Sketch/write how you will convey alternatives in your app

## Structured Decision Making Shiny Storyboard

### Consequences

- What are the consequences of each management action?
- What models do we need to predict consequences?
- What data do we need?

**Sketch/write how you will convey consequences in your app**

## Structured Decision Making Shiny Storyboard

### Tradeoffs

- Do any of your objectives conflict?
- How will the decision-maker weigh the costs and benefits of different actions?

### Sketch/write how you will convey tradeoffs in your app

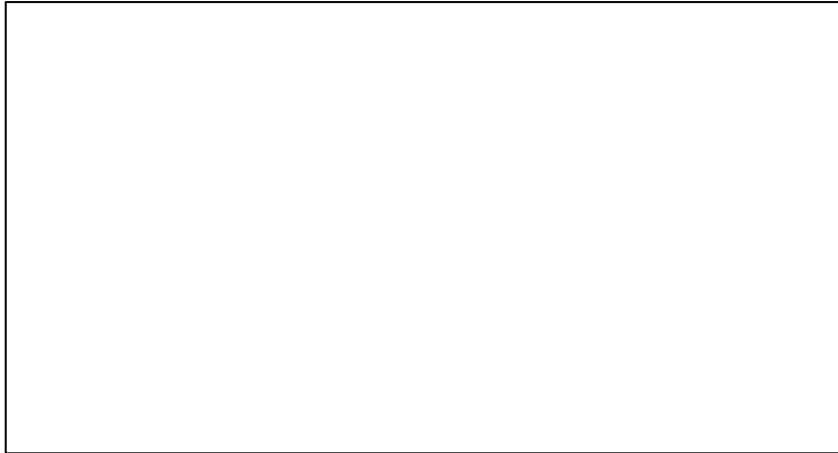

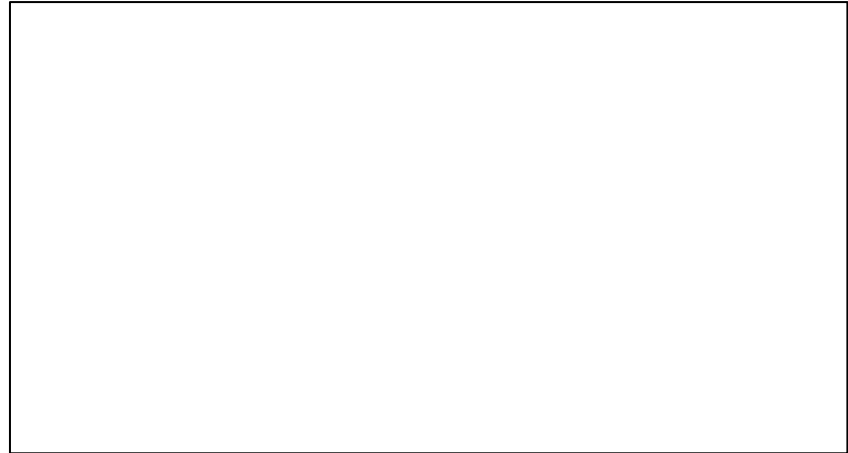

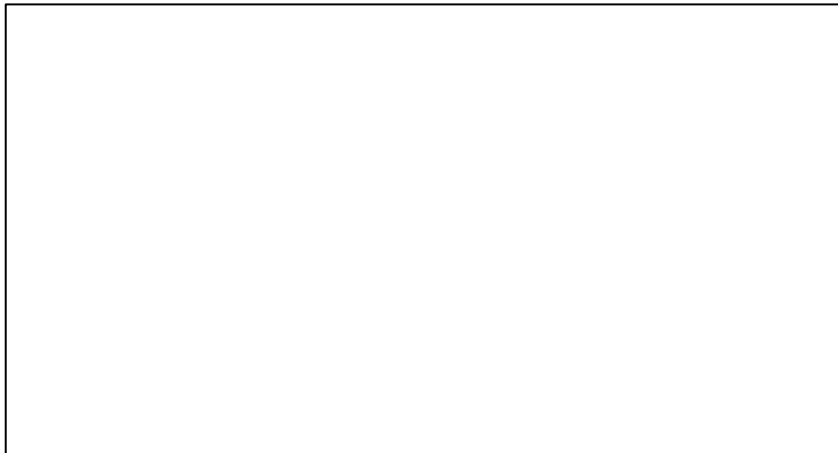

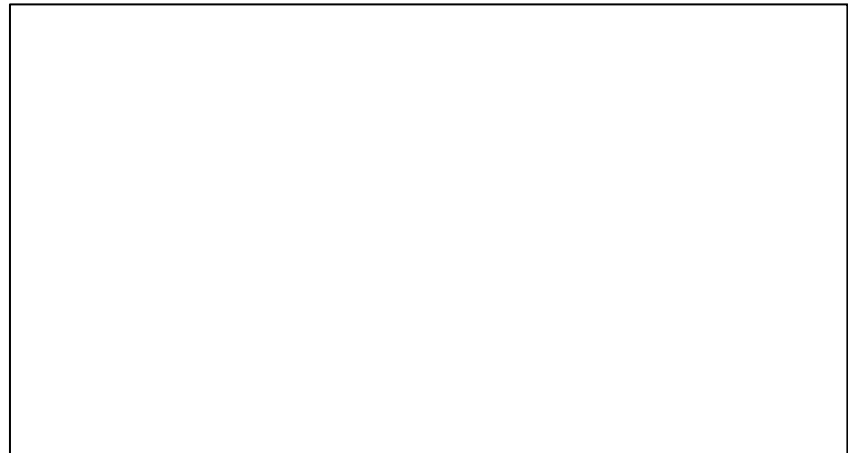

## Structured Decision Making Shiny Storyboard

### Risk and uncertainty

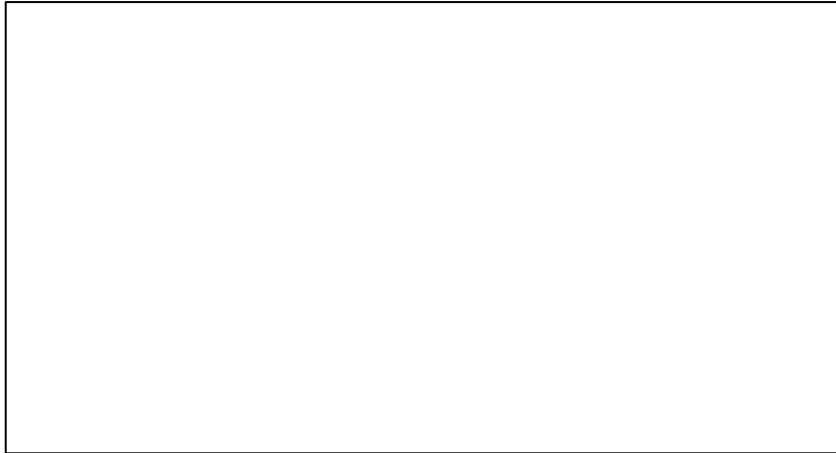

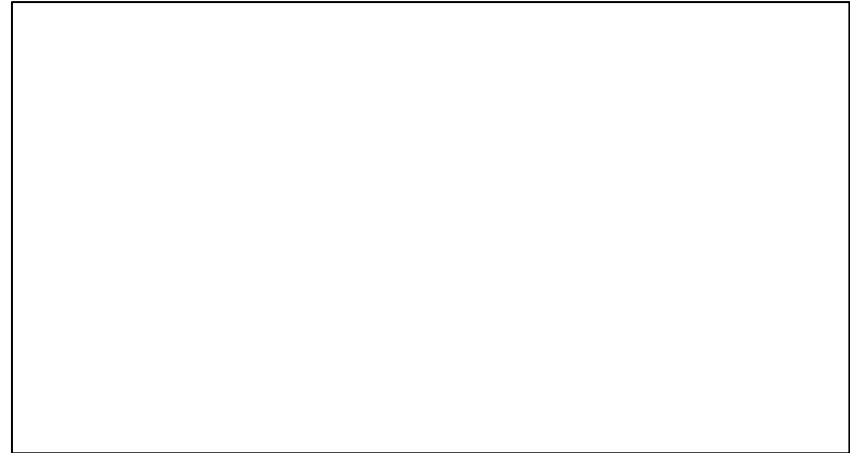

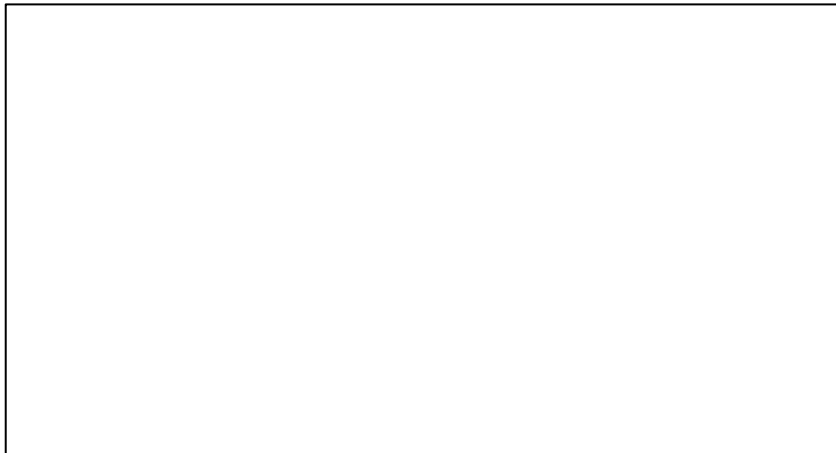

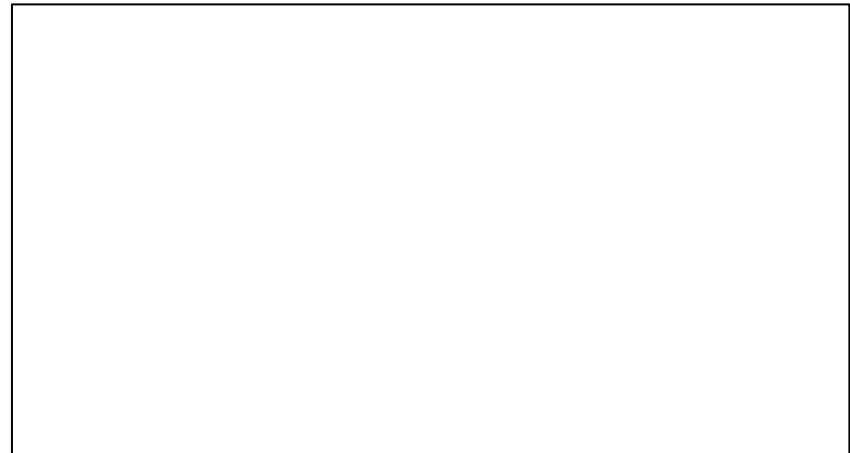

- How do you quantify uncertainty in your decision-making process?
- How sensitive to risk are the people involved in the decision-process? Are they more sensitive to risk in some outcomes than others?

### Sketch/write how you will convey uncertainty in your app
